DATE MAILED: 07/28/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/777,309	Applicant(s) TAKEI, SHUICHI	
	Examiner Tuyen Q. Tra	Art Unit 2873	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 April 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 19 and 20 is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 13 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3, 4, 10-12 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Kido et al. (US 6,589,673 B1).

a) With respect to claims 1, 3, 4 and 18, Kido et al. discloses an organic electroluminescent device, group of organic electroluminescent devices in figure 1 comprising of an anodes (item 2); a cathode (item 6); a luminescent layer (item 4) emitting different colors of light and lying between the anode and cathode; and an electron injection layer (item 5) lying between a luminescent layer and the cathode, the electron injection layer including a first metal compound and a second metal compound and both the first metal compound and the second metal compound including a metal element selected from the group consisting of alkali metals, alkaline earth metals and rare earth metals (col. 8, lines 2-9). Kido et al. does not implicitly disclose a plural type of anodes, cathodes and luminescent layers, but it is inherent from Kido 's structure since making an array of displays such disclosed by applicant would require the use plurality of anode, cathode and luminescent layers in Kido device.

b) With regard to claim 10-12, it should be noted that although claims 10-12 are "method claims", the method steps consist of the broad steps of "providing", "applying" etc and therefore these steps would be inherently satisfied by the apparatus of the reference as modified.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kido et al. (US 6,589,673 B1), as applied to claim 1 above, in view of Nii (US 6,555,959 B1).

Kido et al. discloses an organic electroluminescent device, group of organic electroluminescent devices in figure 1 comprising of an anodes (item 2); a cathode (item 6); a luminescent layer (item 4) emitting different colors of light and lying between the anode and cathode; and an electron injection layer (item 5) lying between a luminescent layer and the cathode, the electron injection layer including a first metal compound and a second metal compound and both the first metal compound and the second metal compound including a metal element selected from the group consisting of alkali metals, alkaline earth metals and rare earth metals (col. 8, lines 2-9).

However, Kido does not disclose both the first metal compound and the second metal compound being one of a fluoride an oxide and a chloride of the metal element.

Art Unit: 2873

Within the same field of endeavor, Nii discloses a material for light emitting device, light emitting device using thereof, and amine compound with teaching of a first metal compound and a second metal compound being one of a fluoride an oxide and a chloride of the metal element (col. 35, line 64-col. 36, line 9).

It would have been obvious, therefore, at the time the invention was made to a person having skill in the art to construct an organic electroluminescent device, group of organic electroluminescent devices with metal compound electron injection layer such as disclosed by Kido et al., with an oxide and a chloride of the metal element such as discloses by Nii for purpose of transporting electron.

5. Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kido et al. (US 6,589,673 B1) as applied to claim 1 above.

Kido et al. discloses an organic electroluminescent device, group of organic electroluminescent devices in figure 1 comprising of an anodes (item 2); a cathode (item 6); a luminescent layer (item 4) emitting different colors of light and lying between the anode and cathode; and an electron injection layer (item 5) lying between a luminescent layer and the cathode, the electron injection layer including a first metal compound and a second metal compound and both the first metal compound and the second metal compound including a metal element selected from the group consisting of alkali metals, alkaline earth metals and rare earth metals (col. 8, lines 2-9).

However, Kido et al. does not disclose method of how to deposit plurality of metal compounds on the electro-optic device. The method of depositing metal layer to the device is not germane to the issue of patentability of the device itself. Therefore, it is

Art Unit: 2873

obvious to one skill in the art at time invention was made to use various way or method to deposit the metal layers for purpose of making such the electrooptic device and therefore this limitation have not given patentable weight.

6. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kido et al. (US 6,589,673 B1), as applied to claim 10 above, in view of Himeshima et al. (US 6633124B2).

Kido et al. discloses an organic electro-luminescence display element, finder screen display device, finder and optical device in Fig. 4 comprising of electrodes (items 1, 5) opposing each other; plural types of luminescent layers emitting different colors of light and lying between the electrodes (col. 12, lines 26-34); and an electron injection layer (item 4) lying between the electrodes (1, 5), the electron injection layer (4) including a plurality of metal compounds (col. 7, lines 20-29).

However, Kido et al. does not disclose method for depositing metal elements according to chemical bond force. Within the same field of endeavor, Himeshima et al. discloses process for producing an organic electroluminescent device with teaching of method for forming metal layers according to chemical bond force (col. 14, lines 20-36).

It would have been obvious, therefore, at the time the invention was made to a person having skill in the art to construct organic electro-luminescence display element with metal layers for electron injection layer such as disclosed by Kido et al., with metal layers formed according to chemical bond force such as discloses by Himeshima et al., for purpose of forming electrode injection layer.

Art Unit: 2873

7. Claims 9 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kido et al. (US 6,589,673 B1), as applied to claims 1 and 10 above, in view of Sato et al. (US 6534202 B2).

Kido et al. discloses an organic electro-luminescence display element, finder screen display device, finder and optical device in Fig. 4 comprising of electrodes (items 1, 5) opposing each other; plural types of luminescent layers emitting different colors of light and lying between the electrodes (col. 12, lines 26-34); and an electron injection layer (item 4) lying between the electrodes (1, 5), the electron injection layer (4) including a plurality of metal compounds (col. 7, lines 20-29).

However, Kido et al. does not disclose method for depositing metal elements according to chemical bond force. Within the same field of endeavor, Sato et al. discloses organic electroluminescent device and process for producing the same with teaching of method for forming cathode of a metal reducing the metal compound (Alkali metals have a high reducing ability) (col. 3, lines 25-28).

It would have been obvious, therefore, at the time the invention was made to a person having skill in the art to construct organic electro-luminescence display element with metal layers for electron injection layer such as disclosed by Kido et al., with method for forming cathode of a metal reducing the metal compound such as discloses by Sato et al., for purpose of reducing energy barrier.

8. Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kido et al. (US 6,589,673 B1), as applied to claim 10 above, in view of Aziz et al. (US 6811896 B2).

Kido et al. discloses an organic electro-luminescence display element, finder screen display device, finder and optical device in Fig. 4 comprising of electrodes (items 1, 5) opposing each other; plural types of luminescent layers emitting different colors of light and lying between the electrodes (col. 12, lines 26-34); and an electron injection layer (item 4) lying between the electrodes (1, 5), the electron injection layer (4) including a plurality of metal compounds (col. 7, lines 20-29).

However, Ueda et al. does not disclose method for depositing metal elements according to chemical bond force. Within the same field of endeavor, Aziz et al. discloses organic light emitting device (OLED) with thick (100 to 250 nanometers) porphyrin buffer layer with teaching of method for forming metal layers according to valences of metals elements (col. 14, lines 20-36).

It would have been obvious, therefore, at the time the invention was made to a person having skill in the art to construct organic electro-luminescence display element with metal layers for electron injection layer such as disclosed by Kido et al., with metal layers formed according to valences of metal elements such as discloses by Aziz et al., for purpose of forming electrode injection layer.

Allowable Subject Matter

8. Claims 19 and 20 are allowed.

The reason for the indication of allowable subject matter is that (claim 19) an electron injection layer formed corresponding to the first luminescent layer and second luminescent layer in common; (claim 20) an electron injection layer formed corresponding to the first luminescent layer and second luminescent layer in common,

Art Unit: 2873

the electron injection layer including Lithium and Strontium disclosed in the claims is not found in the prior art.

RESPONSE TO APPLICANT' S ARGUMENT

9. Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground of rejection.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Conclusion

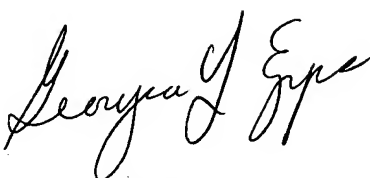

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuyen Tra whose telephone number is (571) 272-2343. The examiner can normally be reached on Monday to Thursday from 8:30am to 6:00pm.

Art Unit: 2873

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Epps, can be reached on (571) 272 - 2328. The fax number for this Group is (703) 872-9306.
